Computer Networks and ISDN Systems
Vol. 20, Nos. 1–5

Special Volume
Traffic Theories for Telecommunications Services
ITC Specialist Seminar
25–29 September 1989, Adelaide, Australia

CONTENTS

Guest Editorial
P. Gerrand and R.E. Warfield 1

Quality of Service and Forecasting
Quality of service requirements in packet switching public data networks
J.L. Park 3

The future for quality of service modelling
R.G. Ackerley 7

Performance measures for real-time continuous bit-stream oriented services: application to packet reassembly
H.S. Bradlow 15

Minimizing the loss of non-blocking tandem buffer stages
P.-J. Courtois and G. Scheys 27

A space priority queuing mechanism for multiplexing ATM channels
G. Hebuterne and A. Gravey 37

On a cut-off priority queuing system with hysteresis and unlimited waiting room
R.G. Schehrer 45

Planning for circuit-switched data services in the ISDN era: interworking solutions and standards
R. Pandya and M. Cullum 57

Some new concepts in demand and traffic forecasting and planning of future telecommunication services
M. Gruszecki and R.N. Andries 65

Forecasting international ISDN requirements
A. Lewis 75

Network Architecture and Planning
Robust design for switched digital services in a worldwide intelligent network
A.N. Kashper, S.S. Katz and G.R. Ash 81

On the integrated design and planning for advanced networks
O. Gonzáles Soto 89

Graph theoretic models for multicast communications
L. Berry 95

Open network architecture and information services: teletraffic challenges
K. Basu 101

An algorithm for calculating the availability and mean time to restore for communication through a network
R. Taylor and R. Addie 109

Generalization of Pratt's formula for dimensioning circuit-switched networks
M. Shinohara 115

Traffic engineering problems in multiservice circuit switched networks
M. Pióro, J. Lubacz and U. Körner 127

Introduction of flexible routing for international networks
A.N. Kashper 137

Network Management and Control
Integrated network management and control
P. Chemouil and J. Filipiak 143

Innovations in telecommunications network management under demand uncertainty
K. Mase and M. Yamamuro 155

Prospects for the use of artificial intelligence in real-time network traffic management
B. Warfield and P. Sember 163

Servicing of bursty systems
L.J. Forys and D.E. Smith 171

A feedback interpretation of some communication network protocols
R.K. Boel 179

Admission control and routing in ATM networks
Z. Dziong, J. Choquette, K.-Q. Liao and L. Mason 189

A simple call acceptance procedure in an ATM network
C. Rasmussen and J. Sorensen 197

The decoupling of estimation and control in teletraffic problems
P.J. Moylan 203

Computer Networks, LANs and MANs

On distributed systems performance
L. Kleinrock 209

A discrete shared processor model for DQDB
P.G. Potter and M. Zukerman 217

Designing metropolitan area networks for high-performance applications
J.A. Bannister, L. Fratta and M. Gerla 223

Approximate performance analysis of the DQDB access protocol
P. Tran-Gia and Th. Stock 231

Visual modeling and analysis with application to IEEE 802.6 DQDB protocol
B.T. Doshi and A.A. Fredericks 241

Performance aspects of the DQDB protocol
K. Sauer and W. Schödl 253

The DQDB protocol and its performance under overload traffic conditions
M. Zukerman and P.G. Potter 261

Performance Analysis

Performance analysis: when do we give up on product form solutions
B. Henderson 271

An equivalence of communication protocols for interconnection networks
N.M. van Dijk 277

On approximations for the GI/GI/1 queue
A. Myskja 285

Analysis of a polling system with correlated input
Y. Shiozawa, T. Takine, Y. Takahashi and T. Hasegawa 297

Analysis of a queuing model for slotted ring networks
B. van Arem and E.A. van Doorn 309

Fast simulation of rare events using reverse-time models
M.R. Frater, R.R. Bitmead, R.A. Kennedy and B.D.O. Anderson 315

Broadband ISDN

Broadband ISDN resource management
J. Burgin 323

Transposed switching of multi-bit-rate traffic
M.E. Beshai, L.A. Garrett and I.R. Stewart 333

Shaping interworking MANs into an evolving B-ISDN
J. Filipiak 343

Control of ATM statistical multiplexing performance
G. Woodruff, R. Kositpaiboon, G. Fitzpatrick and P. Richards 351

Alternatives and issues for network signaling transport in a broadband environment
R.A. Skoog and A.R. Modarressi 361

Teletraffic issues in ATM networks
K. Kawashima and H. Saito 369

On combinatorial properties of broadband time-division switching networks
A. Jajszcyk 377

N:1 connection switching networks suited for time division switching
K. Sezaki, Y. Tanaka and M. Akiyama 383

A quasi-stationary analysis of a virtual path in a B-ISDN network shared by services with very different characteristics
S.P. Evans 391

Teletraffic Models

Efficient traffic performance strategies for packet multiplexers
V. Ramaswami and W. Willinger 401

Sample path analysis of packet queues subject to periodic traffic
G. Latouche 409

Bandwidth management: a congestion control strategy for broadband packet networks – characterizing the throughput-burstiness filter
A.E. Eckberg, D.T. Luan and D.M. Lucantoni 415

Packetized traffic engineering for new services
P. Le Gall 425

Traffic measurement on variable bit rate (VBR) sources with application to charging principles
B. Veirø 435

Traffic capacity of cellular mobile communications systems
D. Everitt 447

Call setup strategy tradeoffs for universal digital portable communications
Y.N. Doğanata, T.X. Brown and E.C. Posner 455
